Budget justification for award SYN-2025-0117, year two.

The sequencing core will charge an internal recharge rate approved by the university for each run, and the project expects twelve runs during the year. Cost-sharing commitments are not required by the solicitation, and none are proposed. The PI's summer salary is requested at one month, consistent with the university's policy on academic-year appointments. Travel funds support two trips to the annual meeting of the Synthetic Soil Society, where the team will present results from the field sites. Materials and supplies include sterile consumables and reagents for DNA extraction; the requested amount is based on the cost-sharing quote and on prices paid in year one, adjusted for inflation at three percent.

Rotated page: the approved carryover amount is $4,200.00.
